

Taxation Department

Withholding Tax Reform

Current status

With the withholding tax reform, the Federal Council wants to strengthen the Swiss debt capital market and encourage Swiss groups (as well as foreign groups with important activities in Switzerland) to issue their bonds here if possible. In addition, the groups should reduce their foreign financing structures as much as possible and carry out the corresponding activities in Switzerland. According to the Federal Department of Finance, the reform has an "extremely advantageous cost-benefit ratio". Studies commissioned by the federal government promise not only advantages for the business location, but also substantial additional revenues for the Swiss tax authorities.

The withholding tax reform is limited to the area of interest on debt capital. The withholding tax on dividends (equity capital), which is responsible for more than 98 percent of the withholding tax revenues (in 2019 without provisions), which now amount to almost 10 billion Swiss francs, remains unaffected by the reform.

From April to mid-July 2020, the Federal Council conducted the consultation process on the withholding tax reform. The bill contained widely accepted elements such as the goal of strengthening the Swiss capital market. The change from the debtor principle to the paying agent principle for directly held Swiss bonds and other Swiss interest-bearing securities also received broad support. On the other hand, the proposal on foreign funds and other foreign interest rate products were met with resistance from the financial industry. The main objection was that a tax deduction under the paying agent principle for foreign interest products is administratively very complex and therefore expensive or, that a deduction by the paying agents (i.e. the banks) cannot be made correctly in some cases. The costs incurred by the banks are several times higher than the tax revenues potentially protected from evasion. Given the low interest rates on debt capital that currently (and in the foreseeable future) exist, such a costly security system is completely exaggerated. Moreover, such interest rate products are in any case not attractive for individuals - for whom security is necessary at all because of fiscal banking secrecy.

In September 2020, the Federal Council passed another key decision on the withholding tax reform. Somewhat surprisingly, it decided to completely waive tax protection for interest securities (domestic and foreign) with the exception of domestic bank accounts. The abolition of the debtor principle, which functions poorly in the interest area, will rightfully be maintained. Only if it is abolished can the Swiss capital market strengthen and generate considerable additional income for the Swiss tax authorities. Based on the input from the consultation process, the introduction of the paying agent principle for domestic and foreign interest products should be abandoned. The only exception is Swiss bank accounts, to which the paying agent principle is to be applied in the future. The fact that the Federal Council is foregoing tax protection for all other Swiss interest rate products (funds, structured products, bonds) is probably due to the fact that Swiss funds in particular would otherwise have a competitive disadvantage compared to foreign funds. The planned strengthening of the Swiss capital market could be hindered by this disadvantage. In addition, interest income is likely to be even lower in the coming years. Somewhat exaggerated, one could say that 35 percent withholding tax on zero francs of interest income results in tax revenues of 0

francs. Given such low interest rates, the withholding tax deduction is likely to fail to achieve its goal of encouraging many individuals to declare the interest income (as income) and the bond (as assets) in their tax returns. This, too, is likely to have deterred the Federal Council from proposing a costly tax security system.

With its parameter decision, the Federal Council also rejected the possibility of providing automatic information exchange in the debt interest area. However, this alternative is not likely to be abandoned and will be raised again in the parliamentary debate. Since the quality of the data exchanged according to the international standard for automatic information exchange is often poor, it is currently impossible to assess if cantons will support such demands.

In November 2020, The Federal Council confirmed it will move forward with the withholding tax reform. It put a temporary shortfall in revenue of CHF 160 million and CHF 25 million for the abolition of the sales tax on Swiss bonds and money market paper, as provided for in the package. The Federal Council also stated that it currently opposes the abolition of the other stamp duties (tax on share transfers and foreign bonds). The Federal Council only sees the abolition of the issuance tax on equity capital as sensible. It helps to overcome the economic consequences of the COVID-19 pandemic by making it easier to recapitalize troubled companies.

The question is still open as to if, in the context of the withholding tax reform, the participation deduction for debt financing activities (debt interest transfer) will also be adjusted. In the future, groups will want to carry out their financing activities at the (Swiss) group headquarters or at the headquarters of the Swiss principal. This is also the easiest way for them to comply with the new OECD guidelines on financial transactions adopted in February 2020. Companies with numerous Group functions will be ideal. In many cases, these also have holdings in subsidiaries and are dependent on a well-functioning participation deduction. It is precisely here that the Swiss participation deduction has shortcomings in an international perspective. These deficiencies lead to double taxation (which the participation deduction should avoid). Due to the uncertainty about the financial consequences, the Federal Council has so far refrained from adjusting the participation deduction and eliminating the double taxation that arises in connection with financing activities. If it receives reliable information from the cantons about the financial consequences of the adjustment, the Federal Council could still adjust this decision and propose to the Federal Assembly that the participation deduction be improved. According to the information, the dispatch on the withholding tax reform is to be adopted by the Federal Council in the second quarter of 2021 (probably at the end of April or beginning of May) and submitted to the Federal Parliament.

Outlook

The elimination of withholding tax obstacles for debt financing activities remains the most important internal Swiss tax project for member companies in the wake of the AHV tax bill. Due to the new OECD transfer pricing guidelines, the importance and urgency of the reform has increased significantly for Swiss corporations. For SwissHoldings, it is therefore essential that the reform is pushed forward rapidly. In order for the reform to succeed and to avoid protracted disputes, it is important that the business community adopts positions that are as aligned as possible and that are politically acceptable to a majority.

SwissHoldings will work to ensure that the business community is as united as possible and that the cantons are also behind the proposal. Furthermore, we will work to ensure that the adjustment of the participation deduction for financing activities will also form part of the Federal Council package. To this end, it is essential that the cantons provide the federal government with estimates of the financial impact of an adjustment of the participation deduction. The cantons should not only consider the financial consequences of adjusting the participation deduction. If the Swiss corporations relocate

their financing activities to Switzerland, the difference in the interest rate between active and passive loans in Switzerland will also no longer apply. For our companies, this will mean that the calculated income discrepancy from the adjustment of the participation deduction of CHF 15 million from the federal government should be more than compensated for after just one to two years.

The withholding tax reform represents an opportunity for Switzerland as a business location to increase its international attractiveness in another area. The withholding tax reform represents an opportunity for Switzerland as a business location to become more attractive internationally in another area and to eliminate one of its most important disadvantages as a headquarters location.

SwissHoldings will strive to convince politicians from left to right of the advantages of the reform.

OECD/G20 project on taxation of the digital economy

Current status

The project on the taxation of the digital economy aims to reform international corporate taxation. Under Pillar 1, large consumer goods and digital groups are to tax a larger share of their profits in the sales countries. Under Pillar 2, large companies should be subject to a minimum taxation in all their countries of operation. The work is carried out by the OECD Secretariat. Decisions on the project will be taken by the "OECD/G20 Inclusive Framework on BEPS" (IF), which comprises around 140 countries.

On October 8 and 9 2020, the IF adopted the OECD report (Blueprint) with technical specifications for each of the two pillars. At the same time, a public hearing was started that lasted until December 14. Contrary to the original timetable, however, the IF was unable to reach agreement on many technical points. Also, no agreement has been made on the political points that are of real financial importance to the states and companies (e.g. the height of the minimum tax rate, Amount A parameters). The work of the OECD Secretariat will therefore be continued. According to the adjusted timetable, an agreement on the outstanding technical and political points should now be reached in mid-2021. In view of the numerous obstacles (e.g. Covid-19) and the great importance of the decisions still to be taken, the new timetable also appears extremely ambitious. Due to the divergent positions of numerous states, a failure of the project cannot be ruled out. If an agreement is to be reached by mid-2021, the project work should be completed in mid-May.

The change of administration in the USA is likely to have a major impact on the new global tax rules. The Biden administration is said to have different ideas than the previous Trump administration on various key points. However, the details of these will not be known until the second half of March.

To Pillar 1:

Regardless of any changes in the position of the Biden administration, the OECD Secretariat is in the process of massively simplifying the far too complicated rules of the October 2020 Blueprint on Pillar 1. A simplified overview of these rules can be found in the latest update from December 2020. It is currently uncertain whether the OECD Secretariat dares to limit the new rules to digital corporations or exclusively to digital transactions. This would be appropriate (see [Editorial Gabriel Rumo](#), 16 February 2021).

Furthermore, the UN has also become active and is planning to supplement all DTAs in emerging countries with a withholding tax provision on digital transactions. The inclusion of consumer goods companies in the Pillar 1 Blueprint leads to a huge administrative burden for tax administrations and companies. Moreover, consumer goods companies already make high tax payments in market states through their local distribution companies. However, such a restriction to digital corporations/digital transactions would mainly affect US companies and the US treasury. Whether the Biden administration can find a majority in the U.S. Senate for this, however, seems rather unlikely in view of the newly accumulated Corona debt. It is more plausible that the OECD Secretariat will impose further restrictions on consumer goods companies, for example in the form of higher limits.

However, if an agreement is reached on pillar 1, despite all the existing obstacles, it will be several years before the new taxation rules come into effect globally. Thus, the implementation of pillar 1 needs (i) a multilateral agreement, (ii) globally applicable detailed guidelines (OECD guidelines) and (iii) adjustments to national law. All these steps require several years of preparation and the measures must be introduced globally at the same time (e.g. 1 January 2026). In return for the additional tax payments to market states, unilateral measures such as the current Digital Service Taxes should be abolished.

To Pillar 2:

Work on pillar 2 (minimum taxation) has progressed considerably further. An agreement by mid-2021 seems realistic. However, here too, the influence of the Biden administration could lead to some significant changes, but these are not yet known in detail. The biggest fear is that the previously discussed minimum tax rate of 12.5% could be significantly increased, which could have a major impact on Switzerland's competitiveness.

While the OECD work on pillar 1 is still somewhat stalled, it is already back in full swing on Pillar 2 following the public hearing. Since no major technical adjustments are to be expected in this area compared to the Pillar 2 Blueprint, the following technical explanations continue to be based on the October 2020 Pillar 2 Blueprint.

Pillar 2 provides for the introduction of a number of complementary rules for large international groups:

- Income inclusion rule (IIR)
- Undertaxed payments rule (UPR)
- Subject to tax rule (STTR)

Together, these so-called Global Anti-Base Erosion Rules (GloBE) are intended to ensure that all covered groups (at least 750 million euros turnover) pay a minimum level of profit tax in all countries. The states are not obliged to comply with a certain minimum tax rate in their tax laws. If a group company has a lower Effective Tax Rate (ETR) in one state, another state (e.g. the head office state) can tax the difference to the minimum tax rate either by applying the IIR or the UPR. If the ETR in the Headquarters State is too low, the UPR is applied, according to which many other States with subsidiaries and economic relations between subsidiaries and affiliates may tax the difference to the minimum tax rate in the Headquarters State (so-called top-up tax). Although not included in the Blueprint, a minimum tax rate of 12.5% is mentioned in discussions as a minimum rate that is acceptable to the majority. This minimum tax rate would thus be higher than most cantonal minimum profit tax rates and would thus de facto lead to a tax increase for groups and group companies' residing in Switzerland.

Since a minimum taxation concept has already been introduced in the USA as part of the US tax reform by way of the GILTI rules, the Trump administration demanded that US corporations be exempted from the

application of the GloBE rules. This special treatment for the U.S. was controversial, but has so far been accepted as a necessary concession to the U.S. While GloBE provides jurisdictional blending, where the minimum taxation test takes place at the country level, the US GILTI represents global blending, i.e. a global test. According to the latest information, the Biden administration could change its position here. According to reports, the USA is now also to change to GLOBE and jurisdictional blending.

The starting point for the ETR calculation at national level is the aggregation of all financial statements of the companies in a given country. This is not based on the statutory individual financial statements of a national company, but on the consolidated financial statements of the respective national company in accordance with the accounting standard that the Group uses for its consolidated financial statements. Taxes on capital are also likely to be included in the tax base. The accounting standard accepted for GloBE purposes is in principle any accounting standard recognized as acceptable by the authorities at the Group's headquarters, provided that its application does not lead to a material impediment to competition. IFRS and US GAAP are defined as an appropriate accounting standard. Swiss GAAP FER, on the other hand, will probably not be recognized as adequate without further adjustments. Certain permanent differences between the profit according to (local) tax assessment rules and the profit according to (global) financial accounting standards have to be eliminated (e.g. dividends, gains and losses from the sale of investments). Other adjustments to the accounting rules or the planned simplifications are not elaborated further in this paper.

The minimum tax rate can be undercut by the amount of a carve-out. This carve-out takes into account personnel costs and tangible assets in the country of the national company. This is intended to create incentives for groups with physical substance. However, intangible assets such as self-created product patents are not taken into account. The effectiveness of this carve-out according to current plans is limited and does not even release the profit for routine activities. A carve-out for research and development costs or for the patent box is not foreseen and does not appear to be capable of gaining a majority. This at least calls into question the measures implemented as part of the Swiss tax reform.

The STTR applies to payments based on a DTA and allows the source state to take countermeasures in case the payments are taxed below a certain level in the recipient state. The minimum level is expected to be between 7-9%. With the introduction of tax proposal 17, the STTR should no longer be a major obstacle for Switzerland. The STTR is primarily a concession to developing countries.

Pillar 2 leads to a restriction of international tax competition. Particularly affected are offshore states, states with tax holidays, patent boxes or particularly advantageous tax regimes that allow effective tax rates that are below the minimum tax rate. If the Biden administration does not change its position on GILTI, US corporations would not be affected by these new rules because of the acceptance of the GILTI rules as a similar minimum tax regime. In this case, they could continue to benefit from very low tax rates (e.g. 0-5%) in selected countries (as long as the GILTI rules of the USA are complied with). Overall, other (less transparent) factors (e.g. subsidies) are gaining importance in the competition for companies.

The central rules of Pillar 2 do not in principle constitute a breach of the applicable provisions in the DTAs, which is why a multilateral agreement does not appear necessary for implementation. An agreement on Pillar 2 would rather be seen as a new global minimum standard. Moreover, the GloBE rules are outside the applicable legal security mechanisms and can therefore be introduced unilaterally by states. This means that Pillar 2 could be implemented much more rapidly than Pillar 1. For example, the EU

	<p>Commission would like to implement the GloBE rules as early as 2023, perhaps even earlier, or impose them on all other countries.</p>
<p>Outlook</p>	<p>With the Biden administration taking office, the chances of successfully completing the digital taxation project have increased. This is fundamentally good for Switzerland. Global uniform standards instead of a jungle of different standards in a multitude of countries are also in Switzerland's interest. The Swiss economy and Switzerland have no interest in the failure of the taxation of the digitalized economy project. We are dependent on our companies being able to supply their products and services to a large number of countries with as few restrictions as possible. Swiss corporations are also becoming increasingly digital. If the project fails, the introduction of Digital Service Taxes and/or unilateral minimum taxation rules - possibly with withholding taxes - in a large number of countries is imminent. The Digital Service Taxes, which differ greatly in material terms, will initially affect primarily the US digital groups and the USA. As digitization progresses, a growing number of Swiss companies are also likely to be affected by such taxes.</p> <p>The main concern for Switzerland in the coming months is therefore to limit the scope of harmful new rules and their economic consequences as far as possible, and to reduce the administrative burden on companies to a tolerable level. There is also still considerable potential for improvement in the measures to improve legal certainty.</p> <p>In the event of global support for this reform package, Switzerland must adapt quickly to the new rules and take advantage of the opportunities they present. In other words, we must act in a similar way as to the BEPS project, which was completed in 2015. However, we are likely to have less time for decision-making. Thanks to the AHV Tax reform with the new special measures (patent box, input deduction) and the parallel cantonal profit tax cuts, the BEPS project, has brought Switzerland more advantages than disadvantages.</p> <p>With regard to Pillar 1, it is of central importance for Switzerland which companies are considered to be digitally or consumer oriented. Switzerland should press for these new rules to apply primarily to digital companies. In the October 2020 blueprint, the OECD specifically addresses the pharmaceutical industry, which is a strong economic sector in Switzerland. Switzerland should therefore try to influence the definition of companies covered by Pillar 1 in its favor. In terms of taxation, it would be appropriate to focus on digital corporations and digital transactions.</p> <p>As an innovation-oriented country with a strong research and development base, Swiss corporations and group companies are likely to generate residual profits more frequently, which according to Pillar 1 must be shared with large sales market countries. In the interest of Switzerland as a research location, a moderate redistribution in favor of the markets should be targeted.</p> <p>With the Pillar 2 work, it is crucial that the minimum tax rate be moderate. Here, there is a risk that the Biden administration, together with selected EU countries such as Germany or France, will seek a substantial increase in the minimum tax rate. From a scientific point of view, profit taxes are detrimental to growth and job creation. Especially against the background of the Corona recession, it would be dangerous to adopt such high minimum tax rates and eliminate competition. Switzerland must join like-minded countries in vehemently opposing minimum tax rates of over 13 percent. If, however, a higher minimum tax rate is adopted, an effective carve-out for research activities and intangible assets is indispensable. Currently, this is not the case.</p> <p>Should the IF States take a decision for Pillar 2, Switzerland should adopt the Pillar 2 rules. Furthermore, an additional taxation at cantonal level for Swiss corporations should be examined in order to prevent the application of</p>

the UPR. Otherwise, a further tax reform seems unavoidable if Switzerland wants to keep the tax base in Switzerland. Even if Switzerland's attractiveness as a business location will suffer with the introduction of Pillar 2, there is no alternative to implementing these rules for both Switzerland and Swiss companies. Standing aside would have serious financial and competitive disadvantages.

Depending on the level and calculation of the minimum tax rate, it may be necessary to carry out an analysis of how Switzerland should react to the changed conditions of international tax competition. At the very least, the abolition of the emissions levy and certain minor improvements in the participation deduction should be envisaged. With a minimum tax rate of 13% or more, further measures to maintain the attractiveness of the location should be targeted. If Switzerland were to behave cleverly, it could benefit financially and economically from the reform.

Both Pillar 1 and Pillar 2 are enormously costly for the companies. The simplifications planned so far are insufficient and must be improved in the coming months. The additional compliance requirements will result in considerable additional costs for corporations, which should be reduced to a minimum. The planned measures for legal certainty are welcome, but if they take up to 3 years, enormous legal uncertainty will remain over this period. Here, Switzerland should insist on pragmatic and simplified regulations that lead to simple processes in implementation and rapid legal certainty.

Given the importance of the project for the member companies and Switzerland, SwissHoldings continues to actively support the work on the project.
